INTRODUCTION

Roosevelt Island is, once again, undergoing a radical transformation of its identity through new tourism and educational institutions on the island and changes to the infrastructure serving the island. The island has a complex and rich history and is probably most well known for its experimental social projects and housing. A small sliver of land in the East River between Manhattan and Queens, Roosevelt Island was inhabited by the indigenous Lenape, bought by the Dutch, ruled by the British, given to a sheriff, and eventually sold to New York City. In search of additional space and recognizing the island’s relative isolation, the city in 1828 started using the island for institutions to house the criminal, the contagious, the mentally ill and destitute. Eventually, in 1975, after the city had leased much of the island to the New York State Urban Development Corporation, the new residents of the island moved into experimental social housing created to expand the affordable housing stock in the city.

The island, technically part of Manhattan, has slowly been tethered closer and closer to both Manhattan and Queens with various forms of transportation, including gondola, subway, and a new ferry landing along the Astoria route of the expanding NYC Ferry service. The completion of the Four Freedoms Park, a monumental landscape designed by Louis Kahn in 1974, but built and then opened in 2012, draws tourists to the southern tip of the island. Most recently, Cornell Tech, an academic partnership between Cornell University and the Technion – Israel Institute of Technology, has just opened the first phase of their new campus which includes housing for 500 students and 16 faculty apartments in a new residential building, along with two new academic buildings, and is in construction on their next building. In this latest phase of its evolution, the island has become more physically connected to the waterfront and is envisioned as an important economic engine for the city.
When Roosevelt Island was planned by Philip Johnson and John Burgee in the 70’s, they imagined it as “a new kind of town – not a very big town…but a very different sort of town.” It had dense housing forming “a community, not a housing project,” open spaces for recreation and play, a town center “where the action is”, a perimeter for walking. It was designed as “a community”, but it is now an extension of the city where the existing local community, the new university community, and expanded tourism are already forming something new.

You will design two projects for Roosevelt Island this semester. Both are opportunities to address current transformations taking place and to engage with the flows of people, program, and the environment on and around the island. We will visit the Noguchi Museum across the river in Queens – studying the work of Isamu Noguchi and considering the materiality and experimental nature of his “playscapes”. We will tour the island, including the new campus at Cornell Tech, and learn about current research on the water, waterfronts, and waterways around the island and in NYC. And we have planned a field trip to Grace Farms by SANAA in Connecticut.

**Project 1: Groundscapes for Movement and Discovery –**
“The environment exists for the purpose of movement”
(Lawrence Halprin – 1965)
Duration: 4.5 weeks (Sep. 5 to Oct. 8)
Program: ferry landing, play space, bike share kiosk
*Field Trip: Saturday, September 8, 11am-2pm: Noguchi Museum in Queens and Roosevelt Island*

**Project 2: Urban Aquatic Field Station –**
Research about social-ecological systems and water resource management
Duration: 8.5 weeks (Oct. 10 to Dec.10)
Program: indoor and outdoor learning environments for water research, labs for community organizations to provide ecological education workshops, bike share, kayak launch
*Field Trip: by bus Saturday, October 20th, Grace Farms, CT*

There are many opportunities for design exploration this semester, and as liberal arts students, we expect that you will bring unique perspectives related to your own particular research interests. Some of the topics/issues we are interested in as a studio include relationships between:
- infrastructure + city; landscape + the built environment; water + constructed ground
- systems and networks – ecosystem architecture
- materials and their effects
- making the invisible > visible
- structured play and learning; play > practice > learning thru experience
- micro to macro and back again; The question of scale; multi-scalar relationships (powers of 10)
- urban and natural ecology and microclimates; The edge effect

**A note about process**
The studio method requires a commitment to the design process – an iterative process with an expectation for risk taking and experimentation. There are no “correct” answers for many of the questions that arise during desk crits – only suggestions for ways to approach research. We expect you to establish your own research question(s) based on the project and to develop a graphic argument to support it. The development of your project, the rigor of your research, the clarity of your representation, the presentation of your design are all significant parts of the evaluation of your work – not just the final product.
HISTORY OF ROOSEVELT ISLAND
An Island of Many Names

Just as landscapes are made and remade, the story of Roosevelt Island’s identity and occupation includes a diverse history of social, cultural, and architectural transformations as its relationship to the larger metropolis has been periodically redefined. Originally known as Minnahanonck (nice island) by the Native Americans, the island didn’t take its current name until 1973. By 1686, the island had already changed ownership and, with it, its name, multiple times – from the Native Americans’ Minnahanonck, to the Dutch Varckens, to the British Manning’s Island, and finally to private ownership as Blackwell’s Island, a name that would remain until 1921. Confronted with the pressures of an expanding New York City, including increases in crime and poverty, city leaders began purchasing nearby islands to build institutions that could contain a growing population of the sick and criminal. The island stayed under the Blackwell family’s ownership until 1828, when the City of New York purchased it and transformed it to an island for municipal institutions such as prisons, poor houses, and nursing homes. Stone from the island was used to build its institutions, with labor provided by the island’s prisons.

In 1921, the island was renamed Welfare Island to reflect its role as a repository for the ill and outcast. In the years that followed, many of the City’s institutions were moved off the island. With the opening of Rikers Island in 1935, the Blackwell Penitentiary closed. By the late 1960s, only two institutions remained. All of the other institutions lay dormant or were demolished. In 1968, New York City Mayor John Lindsay organized a committee to explore options for using Welfare Island, and the idea of a residential community emerged. In 1969, the New York State Urban Development Corporation signed a 99 year lease with New York City to develop the island, using a master plan (the General Development Plan) designed by architects Philip Johnson and John Burgee as its guideline. This plan called for a mixed-income community, with a special emphasis on providing housing for the elderly, hospital workers and the disabled, to be living in a largely traffic free environment. A few years later, the island was renamed Roosevelt Island, and the first residential complex opened in 1975.
Architectural Legacy or A Site for Architectural Speculation

Though relatively small, Roosevelt Island has a distinguished architectural history, including numerous important unbuilt architectural competitions and proposals. Before Johnson and Burgee’s General Development Plan was adopted in 1969, architect and urban planner, Victor Gruen, famously proposed East Island, a radical car-free community of 70,000, with serpentine apartment towers planned along the entire two-mile length of the island. The island has also been the site of several other architectural speculations. For a major housing competition held in 1975, Rem Koolhaas and the Office for Metropolitan Architecture (OMA) proposed two theoretical projects for the island, both of which are featured prominently in his seminal book, Delirious New York. Other entrants of the same competition included Peter Eisenman, Robert A.M. Stern, and O.M. Ungers. As reactions to the failure of modern architecture to address the urban condition, their entries remain significant examples of architects addressing the crisis of the city.

In addition to its prominent legacy of unbuilt proposals, Roosevelt Island has a rich building stock that has been shaped by its elaborate history. This includes an abundance of landmarked structures, including architect James Renwick Jr’s Small Pox Hospital (1856), marking itself as New York City’s only designated landmark ruin. Together with the recently completed Four Freedoms Park by Louis Kahn, and the newly completed and planned buildings for Cornell Tech, the fabric of Roosevelt Island is being, once again, redefined.
Isamu Noguchi (1904-1988) was one of the most important sculptors of his time. He was a protean artist who, in addition to his sculpture, designed and created conceptual projects, landscaped environments, earthworks, gardens, plazas, stage sets, furniture and lighting fixtures.

We will consider his work and thought in the context of his and others ideas on the interaction between play, practice, work & learning. Noguchi was convinced that art and life can and should be an integral whole. Social Design was the key to community and social connection. The dialogue between nature, our selves and a shared experience of wonder was the aim of his art. We will consider these concerns through a close study of Roosevelt Island, its past, present and future, with respect to change & movement of people, of nature, of the city and civic space.

Noguchi’s own history with social play and the unreachable playground of his youth prompted him to look anew at the relationship between the ground and play, our movement in space, and our sense of a journey, discovery and mystery. This experience of nature & culture as a kind of mixing and combining of space and time always brought him back to what he called the “fundaments” of existence - namely, earth and stone, light and air, and the void that permeates all. A key idea in Zen Buddhism is the concept of the void – “That which is form is emptiness and that which is emptiness is form.” Noguchi repeatedly references this paradoxical place in his writings and works. The void encompasses emptiness and form, and form grows out of the void.

“I think of playgrounds as a primer of shapes and functions; simple, mysterious, and evocative; thus educational. The child’s world would be a beginning world, fresh and clear.”
In 2011 Cornell Tech won a competition sponsored by the Bloomberg administration to draw engineering and technology schools to New York City by offering space on Roosevelt Island. The Bloomberg administration invited select universities to submit proposals that demonstrated a commitment to innovation in applied sciences, using higher education to create a deep pool of talent for NYC’s tech sector. Cornell Tech is a new collaboration between Cornell University and the Technion in Israel, working together to ignite new forms of innovation in tech education and entrepreneurship. Their new campus is partially built out, with the first buildings completed and occupied last year, and with full build-out expected by 2043. Cornell Tech students were temporarily housed at Google in Chelsea as they grew the campus culture off site.

Academically, Cornell Tech offers Masters, PhD, and Postdoc degrees and programs. They have research areas in human-computer interaction, social computing, security & privacy, artificial intelligence, data & modeling, and business law. They focus on a studio method for teaching, recognizing that studio culture and peer-to-peer engagement is the hallmark of successful creative education. The campus is (partially) built by private developers who lease back buildings to Cornell Tech. Co-location of start-ups and tech companies within the education facilities is a key aspect of the financial and educational model. While originally promoting a net-zero campus, a campus that would produce as much energy as they use, they have shifted to less ambitious, but still impressive sustainable mission. The Morphosis-designed Bloomberg Center building is net-zero and the Handel-designed new housing tower is the first “Passive House” highrise building. The master plan is by SOM, the landscape is designed by James Corner, Field Operations, and the Bridge is an entrepreneurial / startup focused building designed by Weiss Manfredi.

Students are selected by both Cornell and the Technion and the faculty are from both institutions. Beyond their academic ambitions for their own students, they have specific outreach to K-12 education as part of their mission, and they are already engaged in community outreach around technology and entrepreneurship.
Project 1: Groundscapes for Movement and Discovery
Duration: 4.5 weeks (Sep. 5 to Oct. 8)
Field Trip: Saturday, September 8, 11am-2pm: Noguchi Museum in Queens and Roosevelt Island
Site: Roosevelt Island Ferry Landing

Design a new groundscape for arrival, discovery, and play at the ferry landing along the East River waterfront. This site is located near both subway and gondola stations and will also be a hub for the Citibike bike share network to expand on Roosevelt Island – additional stations are assumed to be at the Roosevelt Island Bridge at the Motorgate Parking Garage and near the Octagon Field at the Community Gardens (see overall island plan). This project begins with a research project, into the behavior and transformation of materials in a state of flow or change. You will consider materials in a state of change (i.e. solid/liquid/vapor – ice, water, steam), thermal dynamics and flow; materials placed under extreme pressure and/or heat; catalytic material transformations to name a couple of processes for consideration.
Material Flows – A Research Project
Materials Research / Casting and Documentation: Incorporate play, discovery, and repetition into your materials research by experimenting with castings that capture or track a form of movement, evolution, growth, or transformation. Use found materials, experiment with casting methods, or use other techniques to link these castings to your experience of Roosevelt Island. You are making 1:1 full-scale casts that are 10” x 10” in plan – these are not models of something else but rather a device or framework for capturing and tracking material flows in a state of both fixity and change – metasta-sis or a change in position, state, or form. They also operate over not just space but also time. Time is a critical condition and consideration in your research and material studies. In other words, you will produce a “performative” prototype that is an “environment that exists for the purpose of movement.” This research and material work is to be done in pairs. You are also responsible for the representational strategy(s) that will record the casting process both in time and material flow. To engage in this representational strategy, consider how Noguchi considers the duality of perspectives while listening/thinking about the stone (material) and the void (flow) – “It is weight that gives meaning to weightlessness.”

Deliverables 1.1 include:
1. 10”x10” cast
2. process documentation (stills from video or similar) stills can be presented on 11”x17” pages
3. plan drawing(s) of your casting full scale, 11”x17” pages
4. plan-based diagram noting a path of movement across your cast-ing that supports concepts used to develop your casting full scale, 11”x17” pages

Due Dates:
Monday, September 10 – bring your teams’ experiential test castings and experimental process documentation to class for desk crits
Wednesday, September 12 – casting and documentation concepts and methods finalized
Monday, September 17 – Final casting and required documentation and drawings due in class; workshops in class; presentation on 9/19
Project 1 Site

Roosevelt Island Ferry Landing

Roosevelt Island Bike Share Locations
Groundscapes for Movement and Discovery

Individually, using principles and concepts found in your casting project and documentation, develop a new ground-scape for movement, discovery, and play. This is an opportunity to create a democratic, open experience of public space. Instead of telling the visitor where to go, what to do, and how to do it, it promotes a place for chance encounters, exploration, discovery and opportunity beyond the known, in other words, “imagined realities” that are set against pre-conceptions of the known and banal “real world.”

This site occupies an important location on the island, with multiple scales of activities and where multiple scales and systems of infrastructure meet. The site is at the edge of water and land, it is located between the new developments of Cornell Tech to the south and the northern part of the island, it sits on a major cross axis of the island with the Queens-borough Bridge spanning above, and it is on the main street that connects tram and ferry landing. It is a site for the convergence of different types of movement – boats, bikes, bodies, others. It is a place for new connections between many different visitors and inhabitants who will experience it at different times, for entirely different reasons, and for different durations. Design a groundscape that will activate, enable, and support these connections.

Required program:
Ferry landing arrivals and departure
Play space
Bike share kiosks for 30 bikes

Final Deliverables 1.2 – due Monday, October 8
Site Plan (required scale is 1/16’=1’-0”)
Using the shared underlay, draw a site plan of your groundscape that includes topographic information in a graphic format of your choosing (topo lines, shadows, etc.). Additionally, include information to locate your performative sectional sequence and your intensified moment.

Performative (2.5D) Sections (minimum scale for overall sequence is 1/16’=1’-0”; minimum scale of intensified moment is 1/4”=1’-0”)
These are a carefully curated sequence of sections that connect the body, the ferry, the bike, movement, and surfaces. Your chosen sections should reinforce your concept(s) for the experience(s) of the site. One sectional moment in your sequence is to be intensified through a three-dimensional technique such as a hybrid section-perspective drawing, a hybrid drawing-model, or other approach discussed with your critic. All sections must include appropriate scale figures and objects: people, bicycles, boats.

Note: Additionally, all of the deliverables for Part 1.1 will be required at the final review.

ARCHITECTURAL DESIGN I/II

This course introduces the student to the complex array of ideas, methods and techniques that form the discipline of architecture. Architectural Design 1 and 2 broaden and deepen the scope of architectural research begun in the major’s entry-level classes and adds a variety of cultural, technological and theoretical issues with which students learn to work.

Architectural Design 1 and 2 is a two-semester sequence of design projects which require that each student work at a variety of scales, with a variety of techniques and in a variety of research situations. Architectural issues include the interpretation of the body in space, the shifting conditions of scale, light, and texture, the nature and complexity of a site or a program and the role of structure, materials and construction. At the same time, the projects in Design 1 and 2 are purposefully embedded in the cultural and social fabric that shapes, and is shaped by, the forms and processes of architectural production. Projects investigate the connections between architecture and other disciplines familiar to the liberal arts students. The projects also refine the students’ knowledge of the designer’s tools – models, drawings, digital images, etc. – that join, often in unexpected ways, the mind, the hand, and the eye. Readings, lectures and workshops complement these tools. Finally, and perhaps most important, the course emphasizes the examination of the process of design as well as its outcome.

STUDENT LEARNING OBJECTIVES

Students in Architectural Design 1 & 2 should be able, at an advanced level, to:

1. Visually communicate architectural concepts and design intent using discipline-specific techniques including:
   • orthographic projections (plans, elevations, sections),
   • paraline projections (axonometrics, isometrics),
   • physical models using various techniques and materials,
   • multiple media and/or combined representational strategies
2. Verbally communicate architectural research methods and spatial concepts
3. Demonstrate an understanding of precedent and site analysis
4. Demonstrate an understanding of design method as a step-by-step, iterative and incremental process of research, synthesis and feedback
5. Demonstrate an understanding of design thinking as responsive to and shaper of social and cultural context
6. Demonstrate the ability to work independently and collaboratively
7. Demonstrate an understanding of the historical and theoretical contexts for architectural representational conventions
8. Utilize both analog and digital techniques in the design process
9. Demonstrate an understanding of program, use and activity
10. Demonstrate an understanding of material and fabrication
11. Utilize a range of analog and digital techniques in the design process
STUDIO PROCEDURES
This course is taught by the studio method – an iterative process that requires dialog, design production, and risk taking by the student to explore ideas in the form of a variety of media. The Studio will be divided into small, individual sections, each led by a Studio Critic. The core method of instruction is that of ‘desk crits’, a one-to-one dialogue at the desk between the student and the Critic. At the desk crit, previous design work is reviewed and discussed and the student and critic formulate the next steps in the process. Desk crits are supplemented by Interim Reviews, or ‘Pin-ups’, where all students in the Section (sometimes teamed up with another Section) present their design ideas for group critique and discussion. The culmination of each project is the Final Review in which students present their work for public evaluation by a group of Studio Critics and Visiting Critics.

Students will remain in the same Studio Section, at the same desk, for the semester. At the midpoint of each semester, critics will shift sections, so by the end of the academic year each student will have been exposed to multiple approaches to design methods. Teaching Assistants will be conducting workshops focusing on techniques and methods relevant to ongoing projects.

You are encouraged to work in the studio and to take advantage of the shared learning environment to discuss your work with your peers.

ATTENDANCE
Attendance is mandatory at all scheduled classes, field trips, and reviews. Studio is held Monday and Wednesday beginning promptly at 9:00 AM. Any student arriving after 9:20 AM will be considered late and anyone that arrives after 10:00 AM will be marked absent.

Absences due to acute illness, a personal crisis (e.g. a death in the family), religious observance, or for other reasons of comparable gravity may be excused. In all such cases, students must promptly email their instructor to communicate the reason for their absence and to arrange an opportunity to review any important information they may have missed.

Students who know they will miss a scheduled class due to religious holidays should email their instructor during the first week of classes with a list of dates for their anticipated absences.

Unexcused absences, late arrivals, or early departures from class will reduce your course grade. Three non-consecutive absences will result in a grade reduction by one-third (1/3) of one letter grade (e.g., A- to B+). Three consecutive absences or four nonconsecutive absences will adversely affect your final grade and may be considered grounds for failing the course.

GRADING
Each Studio Project will be graded with a letter grade and a written evaluation. Your work will be evaluated by the following criteria: (1) idea/concept; (2) conceptual development and design process; (3) final execution. Project #1 will count for 40% of your final grade and Project #2 will count for 60% of your final grade. Sketchbooks will be reviewed periodically by your critic and may be required for grading. The instructors recognize learning and improvement as important factors in determining your final grade.

Students are required to present their work in all Interim and Final Reviews. Failure to do so will reduce the grade of the exercise by a minimum of one letter grade (e.g. B to C). Project grades will be based on the work you present at your Final Review. Work not presented at the designated time will not be reviewed at a later date. Required work that was not completed at the Final Review must be completed in time for grading to receive a passing grade. Additional work completed after the Final Review and before grading will not be considered at the grading session unless otherwise stated by the Studio Critics. NO INCOMPLETES will be given at the end of the course except for situations of gravity that have been cleared with the appropriate Deans, Advisers, and Faculty Members.
SECURITY
After the first week of classes, students will be granted 24-hour access to the studio and DAL through your school ID. It is crucial that the doors to these spaces remain closed and locked at all times for your personal safety and for the security of your belongings. Please do not prop open the door and do not leave any valuables unattended at your desk. The studios and the DAL are open to all students in approved courses; please respect other critics and students that are using the space. Barnard and Columbia Security officers do periodically check the studio but security is a responsibility that we all share; please help us maintain a safe and productive environment.

If your personal belongings are stolen (or go missing) please notify your instructor and Barnard Public Safety (for rooms in the Diana Center) or Columbia Public Safety (for 116 Lewisohn).

STUDIO WORK PRACTICES
General studio rules:
• You must provide your own lock for the locker.
• The studio must remain locked at all times.
• Use the spray hood in the model building room for spray paint or fixative.
• Use headphones for listening to music.
• You are responsible for keeping your desk and your storage area clean and organized. If you are use an empty desk adjacent to your assigned seat, it is also your responsibility to keep this area free of debris.
• 100% of the work surface of your desk space should be covered with 3-ply chipboard or vinyl board cover. Do not cut, carve, glue or otherwise destroy the plywood desktop.
• Please help us recycle and reuse extra materials by donating anything you don’t need to our recycling locations in the studios.

PREREQUISITES
Architectural Representation: Abstraction and Architectural Representation: Perception are both prerequisites for this course. It is recommended that the lecture course, Perceptions of Architecture is completed before enrolling in this class. Priority for this course is given to Architecture Majors. All students accepted into the class must present their past studio work to their critic during the first week(s) of the semester. This can be as a digital or print portfolio or collection of images. If digital, all images should be in one PDF. If print, then the collection is to be clipped together and not larger than 11x17. In all cases, it should be a (highly) edited and organized collection of images that document the work you have done to date in preparation for this course.

MATERIALS
No books are required for this course. Readings will be available on Canvas. Materials for drawings and models will be required and can be purchased locally or online. Please see the Architecture Department website for some supply stores: https://architecture.barnard.edu/node/59931

ACADEMIC ACCOMMODATIONS
If you are a student with a documented disability and require academic accommodations in this course, you must register with the Office of Disability Services (ODS) for assistance. Students requesting accommodations will need to first meet with an ODS staff member. Once registered, students are required to request accommodation letters each semester to notify faculty. Accommodations are not retroactive, so it is best to contact ODS early each semester to access your accommodations. If you are registered with ODS, please see me to schedule a meeting outside of class in which you can bring me your faculty notification letter and we can discuss your accommodations for this course. Students are not eligible to use their accommodations in this course until they have met with me. ODS is located in Milbank Hall, Room 009/008. Columbia ODS is located in Wien Hall, Suite 108A.

WELLNESS
It is important for undergraduates to recognize and identify the different pressures, burdens, and stressors you may be facing, whether personal, emotional, physical, financial, mental, or academic. We as a community urge you to make yourself—your own health, sanity, and wellness—your priority throughout this term and your career here. Sleep, exercise, and eating well can all be a part of a healthy regimen to cope with stress. Resources exist to support you in several sectors of your life, and we encourage you to make use of them. Should you have any questions about navigating these resources, please visit these sites:
Barnard Students: https://barnard.edu/wellwoman/about
Columbia Students: http://www.college.columbia.edu/resources Click on Health-Wellness
Columbia GS Students: https://gs.columbia.edu/health-and-wellness
Columbia SEAS Students: http://gradengineering.columbia.edu/campus-resources
The Barnard Honor Code applies to all students in this class regardless of academic affiliation. Approved by the student body in 1912 and updated in 2016, the Code states:

We, the students of Barnard College, resolve to uphold the honor of the College by engaging with integrity in all of our academic pursuits. We affirm that academic integrity is the honorable creation and presentation of our own work. We acknowledge that it is our responsibility to seek clarification of proper forms of collaboration and use of academic resources in all assignments or exams. We consider academic integrity to include the proper use and care for all print, electronic, or other academic resources. We will respect the rights of others to engage in pursuit of learning in order to uphold our commitment to honor. We pledge to do all that is in our power to create a spirit of honesty and honor for its own sake.

The Columbia College Honor Code and the Columbia College Faculty Statement on Academic Integrity can be viewed here:
